

INDEX TO VOL. XXXV

- A**COUSTIC reflexes in decerebrate cat, 365.
- Alcohol inhalation, effect on viscosity of blood, 265.
- ALVAREZ, W. C. Functional variations in the contractions of different parts of the small intestine, 177.
- Amylase in blood and urine, 301.
- Arenicola larvae, reversibility of geotropism, by salts, 162.
- B**ARTLETT, F. K., H. J. COOPER and E. R. LONG. The independence of the lobes of the liver, 36.
- Blood, clotting of, as seen with the ultramicroscope, 143.
- , distribution of, during splanchnic stimulation, 15.
- , viscosity of, as affected by alcohol inhalation, 265.
- , viscosity of laked, 51.
- , flow in kidney, effect of vagus stimulation on, 151.
- pressure, venous, in man, 73.
- BURTON-OPITZ, R. The viscosity of the blood on inhalation of alcohol, 265.
- The viscosity of laked blood, 51.
- C**EREBROSPINAL fluid, factors influencing origin and circulation of, 268.
- Coagulation, of lymph, 483.
- , of oxalated plasma, 333.
- COOPER, H. J. See BARTLETT, COOPER and LONG, 36.
- COURTRIGHT, R. O. See NICE, ROCK and COURTRIGHT, 194.
- D**ECEREBRATE cat, acoustic reflexes in, 365.
- E**DWARDS, D. J. Compensating phenomena in the distribution of the blood during stimulation of the splanchnic nerve, 15.
- Electrocardiogram, phase difference between homonymous peaks of, 292.
- Enzymes, effect of x-rays on, 224.
- ERLANGER, J. and W. E. GARREY. Faradic stimuli: a physical and physiological study, 377.
- Exercise, effect on temperature and pulse rate, 211.
- F**ARADIC stimuli, 377.
- FORBES, A. and C. S. SHERRINGTON. Acoustic reflexes in the decerebrate cat, 365.
- FRAZIER, C. H. and M. M. PEET. Factors of influence in the origin and circulation of the cerebrospinal fluid, 268.
- G**ARREY, W. E. See ERLANGER and GARREY, 377.
- Geotropism, reversibility by salts in arenicola larvae, 162.
- GODDARD, C. H. The effect of filtration through a Berkefeld filter upon the coagulability of oxalated plasma, 333.
- GRUBER, C. M. See MARTIN, GRUBER and LANMAN, 211.
- H**EART BEAT, Effect of temperature on, in amblystoma embryos, 199.
- rate, and temperature after exercise, 211.
- , effect of temperature on, in amblystoma embryos, 199.

- Heat production, in smooth muscle, 340.
- HENDERSON, Y. and A. L. PRINCE. The oxygen pulse and the systolic discharge, 106.
- . The systolic discharge and the pericardial volume, 116.
- Hepatic artery in controlling outflow of blood from liver, 87.
- HILL, R. H. and S. SIMPSON. The effect of intramuscular injection of pituitary extract on the secretion of milk in a human subject, 361.
- HOOKE, D. R. Observations on the venous blood pressure in man, 73.
- HOWELL, W. H. Prothrombin, 474.
- . The clotting of blood as seen with the ultramicroscope, 143.
- . The coagulation of lymph, 483.
- HOSKINS, R. G. and H. WHEELON. Ovarian extirpation and vasomotor irritability, 119.
- K**ANDA, S. The reversibility of the geotropism of arenicola larvae by salts, 162.
- Kidney, effect of vagus stimulation on blood flow in, 151.
- KING, C. E. Studies on blood and urinary amylase, 301.
- L**AKED blood, viscosity of, 51.
- LANMAN, T. H. See MARTIN, GRUBER and LANMAN, 211.
- LAURENS, H. The influence of temperature on the rate of the heart beat in amblystoma embryos, 199.
- Liver, independence of lobes of, 36.
- . outflow of blood from, 87.
- LONG, E. R. See BARTLETT, COOPER and LONG, 36.
- Lymph, coagulation of, 483.
- M**ACLEOD, J. J. R. and R. G. PEARCE. The outflow of blood from the liver as affected by variations in the condition of the portal vein and hepatic artery, 87.
- MARTIN, E. G., C. M. GRUBER and T. H. LANMAN. Body temperature and pulse rate in man after muscular exercise, 211.
- Milk, effect of pituitary extract on secretion of, 361.
- Muscle, smooth, heat production in, 340.
- N**EWBURG, I. See PORTER, NEWBURG and NEWBURG, 1.
- NEWBURG, L. H. See PORTER, NEWBURG and NEWBURG, 1.
- NICE, L. B., J. L. ROCK and R. O. COURTRIGHT. The influence of pituitrin on respiration, 194.
- O**VARIAN extirpation, effect on vasomotor irritability, 119.
- Oxygen pulse, 106.
- P**EARCE, R. G. Effect of vagus stimulation on the blood flow through the kidney after section of the corresponding splanchnic nerve, 151.
- . See MACLEOD and PEARCE, 87.
- PEET, M. M. See FRAZIER and PEET, 268.
- Pericardial volume, relation to systolic discharge, 116.
- PILCHER, J. D. and T. SOLLMANN. Studies on the vasomotor centre: the effects of hemorrhage and reinjection of blood and saline solution, 59.
- . Studies on the vasomotor center: the effects of intravenous infusion of normal saline solutions, 70.
- Pituitary extract, effect on secretion of milk, 361.
- Pituitrin, effect on respiration, 194.
- Plasma, oxalated, effect of filtration on coagulation of, 333.
- Pneumonia, effect upon vasomotor center, 1.

Portal vein in controlling outflow of blood from liver, 87.

PORTER, W. H., L. H. NEWBURG and I. NEWBURG. The state of the vasomotor apparatus in pneumonia, 1.

PRINCE, A. L. See HENDERSON and PRINCE, 106, 116.

Prothrombin, 474.

Pulmonary artery, respiratory pressure variations in, 124.

Pulse rate and temperature after exercise, 211.

RESPIRATION, effect of pituitrin on, 194.

Respiratory pressure variations in pulmonary artery, 124.

RICHARDS, A. The effect of X-rays on the action of certain enzymes, 224.

ROCK, J. L. See NICE, ROCK and COURTRIGHT, 194.

SALANT, W. and C. S. SMITH. The toxicity of sodium tartrate, 239.

SHERINGTON, C. S. See FORBES and SHERINGTON, 365.

SIMPSON, S. See HILL and SIMPSON, 361.

Small intestine, contractions in different parts of, 177.

SMITH, C. S. See SALANT and SMITH, 239.

Smooth muscle, heat production in, 340.

SNYDER, C. D. Is the contraction of smooth muscle accompanied by heat production? First communication, 340.

Sodium tartrate, toxicity of, 239.

SOLLMANN, T. See PILCHER and SOLLMANN, 59, 70.

Splanchnic stimulation, effect upon distribution of blood, 15.

Stimuli, paradic, 377.

Systolic discharge, and oxygen pulse, 106.

Systolic discharge, relation to oxygen absorbed, 106.

———, relation to pericardial volume, 116.

TARTRATE, sodium, toxicity of, 239.

Temperature, and pulse rate after exercise, 211.

———, effect of, on rate of heart beat in amblystoma embryos, 199.

Testes, effect of extirpation of, on vasomotor irritability, 283.

VAGUS stimulation, effect upon blood flow in kidney, 151.

Vasomotor center, effect of hemorrhage on, 59.

———, effect of saline infusion on, 59.

———, in pneumonia, 1.

——— irritability, effect of extirpation of testes on, 283.

———, effect of ovarian extirpation on, 119.

Venous blood pressure, in man, 73.

Viscosity, of blood, effect of alcohol inhalation on, 265.

———, of laked blood, 51.

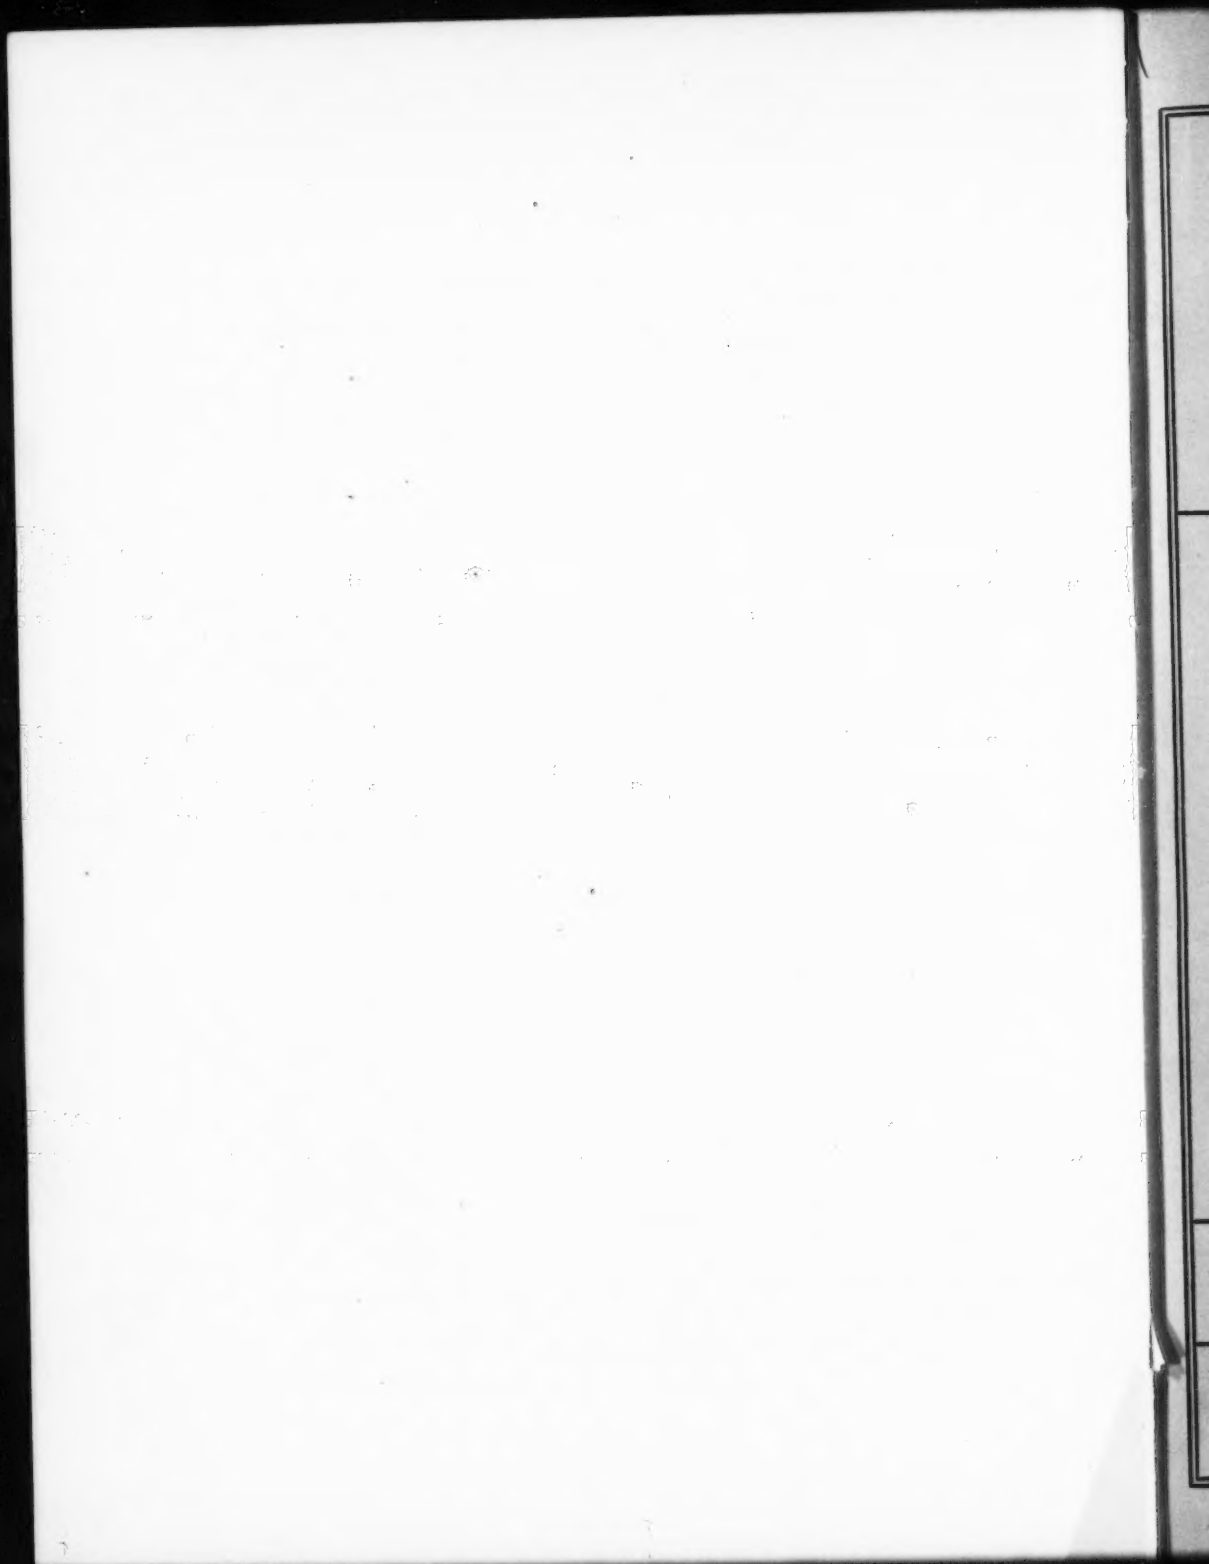

WHEELON, H. See HOSKINS and WHEELON, 119.

———, Extirpation of the testes and vasomotor irritability, 283.

WIGGERS, C. J. The nature and causes of the respiratory pressure variations in the pulmonary artery, 124.

WILLIAMS, H. B. On the cause of the phase difference frequently observed between homonymous peaks of the electro-cardiogram, 292.

X-RAYS, effect on enzymes, 224.

GRAHAM LUSK
A. B. MACALLUM
S. J. MELTZER

THE AMERICAN JOURNAL OF PHYSIOLOGY is issued monthly by the American Physiological Society under the direction of an Editorial Committee appointed by the Society. There are at present from two to three volumes yearly, each of about five hundred pages. The price of one volume, postage free, is five dollars to subscribers in the United States and Canada and five dollars and twenty-five cents to subscribers in other countries. All subscriptions are payable in advance.

Articles submitted for publication may be sent, preferably by registered mail, to the Managing Editor, Dr. D. R. Hooker, Johns Hopkins Medical School, corner of Washington and Monument Streets, Baltimore, Md., or to any member of the Editorial Committee. All business communications should be sent to the Managing Editor.

NOTE. The increase in the number of pages and the decrease in the price per volume of the Journal above stated is effective with the present volume.

CONTRIBUTORS ARE REQUESTED TO OBSERVE THE FOLLOWING SUGGESTIONS.

1. While the length of articles cannot be specified, they should not run to excessive length especially by inclusion of unessential tables and protocols which add materially to the cost of publication.

Continued on page 3 of cover

2. Each article should conclude with a brief summary of results, suited to the needs of reference journals.

3. Reference to literature cited should contain, first, the name of the author or authors; second, the name of the journal or book; third, the year; fourth, the volume number and fifth, the page. Thus, Meltzer: *American Journal of Physiology*, xxi, 1908, 449. References should be numbered serially and be gathered at the end of the paper.

4. All figures for illustration should be submitted in such form as to admit of photographic reproduction without retouching or redrawing. These latter procedures are expensive and are liable to error.

Tracings on smoked paper reproduce well if the white lines are distinct and separate and the background is uniform black. Authors may safely retouch breaks or weak spots in the white lines with white ink and fill in the background with India ink. Letters and symbols should be clear and legible.

Curves laid on ordinate paper should be in India ink. Background lines in blue will not reproduce; red, yellow and green will reproduce black. Plotted curves and drawings yield better results if the originals are large enough to permit a very considerable reduction (two to fourfold) in the plate used for illustration.

Unless specific instructions are given by authors, the printer will be allowed to use his judgment in determining the amount of reduction on all figures. In general such reduction will conform to the journal page so that the reader views the figure and legend without change of position.

Manuscripts, and particularly figures, should be carefully protected by a stiff board against injury when sent by post or express.
